

COMPANY PROFILE

In today's world IT is not just an abbreviation, it is part of our daily lives. For years and years computers have been changing the way people interact, the way businesses work, and the way societies evolve. Founded almost twenty years ago, when modern technology was still fiction, DIGIT COMPUTER ENGINEERING is a pioneer and role model in Macedonia's rapid IT sector development. Surviving amidst rough geopolitical turmoil our company has preserved its leading role in Macedonia's dynamic and ever-growing IT sector.

DIGIT COMPUTER ENGINEERING has always been on the run for solid development and progress by implementing state-of-the-art concepts like lifelong education of human resources. Our company's approach is based on utilizing the ubiquitous nature of IT in order to improve competitiveness of our business clients and to meet the lifestyle demands of our end customers. Being a key enabler for growth, efficiency, and better quality of life, information technology is at the very core of our business model.

Our goal is to provide clients with vital components to streamline business processes, to promote effectiveness and sustainability, to encourage growth, and to foster innovation. Partnership, in our view, is not just a long-term relationship, but rather a willingness to help our clients grow and advance. We do this by providing dynamic solutions that evolve with time and the growing needs of our clients.

In terms of hardware, we offer flagship products by leading international manufacturers including Epson, Genius, HP, Fujitsu, and Honeywell. Our offerings contain everything from printers, POS terminals and large format printers through barcode scanners, computer peripherals and network equipment up to laptops, servers and high-end workstations. What's more, we provide full warranty, post-warranty, and complete servicing solutions based exclusively on original parts by the original manufacturers.

Apart from our extensive range of hardware products, we have a software engineering team dedicated to developing custom applications for our clients. Being at the heart of today's business, ERP software is our main expertise. We can offer custom-built modules for HR, finance, accounting, and production, among many others. Technological convergence has also always been a critical part of our business, as we strive to provide solutions that encompass many aspects of different technologies. Our wireless handheld devices running on custom software applications are an example of such convergence.

DIGIT COMPUTER ENGINEERING is here for you, ready to embark on a journey of long-term partnership. We hope that our services suit you, and that our willingness to innovate reflects your desire to grow further. Take a look at the other parts of our website to learn more about what we offer and what we can do for you and your business.

DIGIT COMPUTER ENGINEERING

A desire to grow. Together.
